Reasons for Allowance

1. This action is in response to the amendment and remarks filed 1/14/11.

Allowable Subject Matter

2. Claims 1-7 and 10-15 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

It's interpreted, the prior art of record either singularly or in proper combination fails to teach a receiving signal received at each of the receiving antennas is directly inputted to all the serially coupled corresponding multipath interference canceling units without having passed through any of the other multipath interference canceling units.

Onggosanusi et al. (US20030139139), Juntti et al. (US20030179814), Sugimoto et al. (US6661836), Myoshi et al. (US20030067971) and Chitrapu et al. (US20070211836) in combination discloses a receiving apparatus using a CDMA method for receiving signals by N receiving antennas (N is a positive integer), the signals being transmitted by M transmitting antennas (M is a positive integer); serially coupled multipath receiving signal demodulating units for primary demodulation of the signals received by the receiving antennas, for estimating the signals transmitted from the transmitting antennas, and for obtaining a received signal of each path of the receiving antennas in a multipath environment based on the estimated signals; serially coupled multipath interference canceling units for deducting the obtained signals received through the paths other than a target path from the signals received by the receiving antennas to obtain

Art Unit: 2617

multipath interference cancelled signals; and a demodulating unit for secondary demodulation of the multipath interference cancelled signals, wherein the multipath receiving signal demodulating units and the multipath interference canceling units are serially arranged in stages; each of the stages other than the first stage updates a channel coefficient estimated based on a known pilot signal transmitted from the M transmitting antennas using a multipath interference cancelled signal provided by a multipath interference canceling unit in an upper stage.

However, the cited references fail to teach a receiving signal received at each of the receiving antennas is directly inputted to all the serially coupled corresponding multipath interference canceling units without having passed through any of the other multipath interference canceling units. Therefore, the prior art of record either singularly or in combination fails to teach the above claimed limitations for claim 1 and claim 14 is therefore the reason for allowance. All dependent claims are therefore allowed under same reasons set forth above

Conclusion

3. The prior art not relied upon but considered pertinent to applicant's disclosure is made of record and listed on form PTO-892.
